LunulaLaser BY ERCHONIA™

Have Beautiful Feet Again

The Lunula Laser is the 1st and only non-thermal FDA Market Cleared laser device for the temporary increase of clear nail for patients with Onychomycosis

A New Era in Nail Health & Rejuvenation

Lunula is not just another fungal nail treatment it is the first and only solution that actively stimulates healing, restores circulation, and rebuilds nail integrity. Unlike outdated approaches that focus only on fungal eradication, Lunula promotes true tissue repair, ensuring long-term nail health without side effects or damage.

Nitric Oxide: The Key to True Nail Healing

Unlike infrared lasers, systemic drugs, and topical antifungals, Lunula uniquely stimulates nitric oxide production, enhancing:

- ✓ **Vasodilation & Circulation**– Increased blood flow delivers essential oxygen and nutrients to the nail bed.
- ✓ **Collagen Production & Tissue Repair** – Strengthening the bond between the nail plate and nail bed, preventing further separation.
- ✓ **Antimicrobial & Anti-Inflammatory Effects** – Helping to maintain a healthier nail environment while promoting **long-term healing.

WHAT MAKES LUNULA THE ONLY TRUE NAIL HEALING SOLUTION

Infrared Lasers & Systemic Medications Do Not Stimulate Healing

While these treatments kill fungus, they do nothing to repair or rejuvenate the nail. Lunula stimulates nitric oxide, enhancing circulation, collagen production, and tissue restoration.

Topical Medications Can Cause Further Damage

Many topical treatments are designed to loosen the nail plate so antifungal agents can penetrate the nail bed. However, this process weakens the bond between the nail plate and nail bed, often leading to long-term nail deformities and further damage.

Lunula Restores Nail Strength & Bonding

Through increased nitric oxide levels and circulation, Lunula helps reconnect the nail plate to the nail bed, improving overall nail structure, thickness, and clarity.
